

# Formative Assessment Test Bank

## Mathematics

### Introduction

The following collection of documents is a test bank of formative assessment items written from Alaska's Department of Education and Early Development Grade Level Expectations for Mathematics. It has been designed for the classroom teacher's use and is intended to drive instructional activities in alignment with the state's GLEs. It is a very comprehensive collection, however, it is not intended to be exhaustive. These sample items will be helpful for teachers as they develop other assessment items for use in their own classrooms.

### Scoring

A key has been included for each GLE strand. Multiple choice items are worth 1 point each. Each response in a matching item is also worth 1 point. Open response and constructed response items should be scored using a simple 3 point scale:

- 0 pts - Incorrect response
- 1 pt - Correct response (should include correct units as appropriate)
- 2 pts - Correct response with detailed work leading to the correct response
